CYBERTOOLS

TOOLING AND MOULDING EXPERTS

ENVIRONMENTAL + SUSTAINABILITY POLICY

Cybertools Limited is committed to reducing its impact on the environment through reduction of energy consumption and waste.

The company is aware of the impact that plastic can have on the environment if the safe disposal is not considered at the design and manufacturing stage.

At Cybertools we have been involved with a project to actively reduce waste and the use of natural resources.

Examples of this are:

- Investment in new energy efficient machinery
- Replacement of lights with LED lighting
- Use of energy efficient materials for building construction
- Reducing material waste at source either by investing in hot runner tooling (zero waste) or reclaiming waste material on site
- Encouraging all staff to participate in a continuous improvement program, reducing scrap levels and improve overall efficiency
- Projects to reduce single use products, by replacing them with re-usable alternatives
- Working with customers to improve designs to reduce energy requirements over the life of the product
- Working with customers to improve recycling of products at end of life
